Corn leuD subunit of 3-isopropylmalate dehydratase amino acid sequence

3-isopropylmalate dehydratase. Corn; soybean; wheat; rice; dihydroxyacid dehydratase; leuC; leuD; branched chain amino acid transferase; biosynthetic enzyme; antibody;

Zea mays.

W09921880-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAY28439-Y28442 are fragments of corn, soybean, wheat and rice leub subunit of 3-isopropylmalate dehydratase, amino acid sequences. Sequences AAX89442-X89465 are nucleic acid fragments that encode all or a substantial portion of dihydroxyacid dehydratase, a branched chain amino acid transferase, a leuc or a leub subunit of 3-isopropylmalate dehydratase from wheat, corn, soybean or rice. These enzymes are involved in biosynthesis and utilization of branched-chain amino acids. The nucleic acid sequences can be used to alter the level of expression of a branched chain amino acid biosynthetic enzyme in a host cell. They can also be used to obtain a nucleic acid fragment encoding a branched chain amino acid biosynthetic enzyme. The encoded proteins may be used to prepare antibodies for detecting the proteins in situ in cells, or in

Sequences AAX89442-X89465 are nucleic acid fragments that encode all or a substantial portion of dihydroxyacid dehydratase, a branched chain amino acid transferase, a leuc or a leub subunit of 3-Isopropylmalate dehydratase from wheat, corn, soybean or rice. These enzymes are involved in biosynthesis and utilization of branched-chain amino acids. The nucleic acid sequences can be used to alter the level of expression of a branched chain amino acid biosynthetic enzyme in a host cell. They can amino acid biosynthetic enzyme, and to identify inhibitors of a branched chain amino acid biosynthetic enzyme. The encoded proteins may be used to prepare antibodies for detecting the proteins in situ in cells, or in vitro in cell extracts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          acid transferase, a leuC or a leuD subunit of 3-isopropylmalate dehydratase from wheat, corn, soybean or rice. These enzymes are involved in biosynthesis and utilization of branched-chain amino acids. The nucleic acid sequences can be used to alter the level of expression of a branched chain amino acid biosynthetic enzyme in a host cell. They can also be used to obtain a nucleic acid fragment encoding a branched chain amino acid biosynthetic enzyme, and to identify inhibitors of a branched chain amino acid biosynthetic enzyme. The encoded proteins may be used to prepare antibodies for detecting the proteins in situ in cells, or in
                                                                                                                                           Corn; soybean; wheat; rice; dihydroxyacid dehydratase; leuC; leuD; branched chain amino acid transferase; biosynthetic enzyme; antibody; 3-isopropylmalate dehydratase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAY28439-Y28442 are fragments of corn, soybean, wheat and rice leuD subunit of 3-1sopropylmalate dehydratase, amino acid sequences. Sequences AAX89442-X89465 are nucleic acid fragments that encode all or substantial portion of dihydroxyacid dehydratase, a branched chain amino

                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                               in biosynthesis and utilization of branched chain amino acids. The nucleic acid sequences can be used to alter the level of expression of a branched chain amino acid biosynthetic enzyme in a host cell. They can also be used to obtain a nucleic acid fragment encoding a branched chain amino acid biosynthetic enzyme, and to identify inhibitors of a branched chain amino acid biosynthetic enzyme. The encoded proteins may be used to prepare antibodies for detecting the proteins in situ in cells, or in vitro in cell extracts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAY28439-Y28442 are fragments of corn, soybean, wheat and rice leub subunit of 3-isopropylmalate dehydratase, amino acid sequences. Sequences AAX89442-X89465 are nucleic acid fragments that encode all or a substantial portion of dihydroxyacid dehydratase, a branched chain amino acid transferase, a leuC or a leub subunit of 3-isopropylmalate dehydratase from wheat, corn, soybean or rice. These enzymes are involved

The polypeptides or nucleic acids encoding them are fully active identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from non-plant from plant with nucleic acid or amino acid sequences from non-plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 5; SEQ ID NO 1302; 261pp + Sequence Listing; English.

                The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                         Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant

                                                                                                                                                                               The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are the polypeptides or nucleic acids encoding them are the polypeptides or nucleic acids encoding them.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant

                                                                                                                                                                                               The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant

                                                                                                                                                                                                                                                             The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tietjen K,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Arabidopsis thaliana

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAB96359 standard;
                                                                                                                                                                                                                   The present invention relates to the genomic sequence of Pyrococcus abyssi (see AAF86431 and AAH41223-7) and P. abyssi proteins. P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is one such P. abyssi protein. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to
                                                                                                                                                                                                                                                                                                                                                                   New nucleotide sequences isolated from proteins useful in industry – \ensuremath{\mathsf{proteins}}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hyperthermophilic archaeon;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to the genomic sequence of Pyrococcus abyssi (see AAF86431 and AAH41223-7) and P. abyssi proteins. P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is one such P. abyssi protein. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to 10 degrees centigrade.

Note: This patent is in the same patent family as WO200065062, which contains additional sequences as shown in AAB99132-AAB99143, AAH75903-AAH75920 and AAG66436.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
